- Traditional banks: more paragraphs/sentence > dense
- Challenger banks: less paragraphs/more words > light

ING: A HYBRID BANK

OK, NOW WHAT ?

1. Expand to all Belgian banks

- *KBC, Belfius, Revolut ..*

2. Restricted view of campaigns

- *Publicly available at the time*
- *Small number of samples*
- *Communication channel (social media, mobile application)*

3. Use internal data

- *Analyze previous campaigns with success metrics to see if some features contribute to a campaign's success etc.*
- *Insights for future campaign directions.*

HOW TO DO THIS:

OverViews

DATASET BUILDER

Bank campaign communication research

Workspace

- DEMO - Dataset builder
- DEMO - Campaign run
- DEMO - Overview
- DEMO - AI chatbot
- Overview
- Dataset builder
- Run campaign coding
- Dataset normalisation
- Chat & graphs

Feature lists

- *Overviews: Graph visualization & comparison*
- *Dataset builder: build dataset of URL, scrapping, cleaning, categorizing URL, filtering*
- *Campaign run/coding: score and build the final datasets csv/json of campaign & can be exported or used in the app directly*
- *Datasets normalization: Your datasets need normalization, cleaning,wording change it'll help you and can be LLM powered*
- *Chat: AI chatbot allowing to communicate with your datasets, have guard rails against hallucination and can generate graph and table.*

“I need URL, so I go datasets builder”

The screenshot shows a web application interface for building datasets from URLs. It features a dark theme with a sidebar on the left containing a list of banned URL words or phrases: 'faq', 'help', 'support', 'article', 'articles', 'news', 'nieuws', 'actualites', 'actus', and 'nrc'. The main area has a text input for 'Banned URL words or phrases' and a 'Save URL cleaning rules' button. Below this is a section for 'Reject every child URL below these roots' with a text input containing three URLs from 'ing.be'. A red progress bar indicates '1. Gather recursive sitemaps'. Below the progress bar are four statistics: 'Sitemap URLs: 4321', 'After code filter: 3567', 'Code rejected: 754', and 'Languages: 3'. There is a button to 'Review deterministic URL decisions'. Below this is a section for '2. Scrape filtered pages with Camoufox' with a 'Stop active scrape' button. At the bottom, there is a text input for 'Audit cache: exclude exact duplicates and incomplete pages' and a slider for 'Minimum useful text characters' set to 200.

Banned URL words or phrases

faq
help
support
article
articles

nieuws
actualites
actus
nrc

One product-root URL per line. The root product page remains included; every deeper child URL is rejected.

Reject every child URL below these roots

https://www.ing.be/en/individuals/insurance/insure-my-home
https://www.ing.be/fr/particuliers/assurances/assurer-mon-habitation
https://www.ing.be/nl/particulieren/verzekeren/mijn-woning-verzekeren

Save URL cleaning rules

1. Gather recursive sitemaps

Sitemap URLs
4321

After code filter
3567

Code rejected
754

Languages
3

> Review deterministic URL decisions

2. Scrape filtered pages with Camoufox

Stop active scrape

Audit cache: exclude exact duplicates and incomplete pages

Minimum useful text characters
200

- Scan the sitemaps to build a URL list and sort by languages in case if u want a single languages
- Filtering of URL based on word, you don't want legal to hurt your datasets just write legal, can also filter url nested in other url in case if you just want a product and not anything url hiding in that page.
- LLM powered categorising of url what url is for which subject, which target audience to help have a datasets with customised labels

☒ Retry records with coding errors

☐ Recode all captured campaigns in the selected scope with the current prompt [?](#)

Build or resume selected demo campaign dataset

ING presentation dataset

The table and first export follow the selected bank scope. Legacy prose remains intact in JSON; CSV keeps its explanation in evidence columns and leaves non-graphable legacy category cells empty until recoded.

campaign	bank	name	product	evidence quality
ING_borrowing	ING	Borrowing money	Borrowing and loans	Medium
ING_credit-cards	ING	Compare our credit cards	Credit cards	Medium
ING_current-accounts-packs	ING	Find the right bank account	Current account packs	High
ING_expatriant	ING	Banking for expats in Belgium	Expatriant banking and everyday banking services	Medium
ING_fraud-and-security	ING	Fraud and security	Security and fraud prevention	Medium
ING_insurance	ING	Simulate and buy your insurance	Insurance	Medium
ING_investing	ING	Investing money	Investing	Medium
ING_managing-my-assets	ING	Managing my assets	Asset management and financial planning	Medium
ING_minors	ING	Banking for your child	Youth banking accounts and savings	High
ING_my-life	ING	My life	Personal finance and life-event content	Medium

Download ING JSON

Download ING CSV

Download all banks JSON

Download all banks CSV

- Use all of the urls,labels,text,pages,screenshot to make a full analysis on each campaign to then build a feature list that can be customized
- Can be by single bank or all bank, by languages etc
- Easy overviews of the datasets in table
- CSV or JSON your sauce your rule

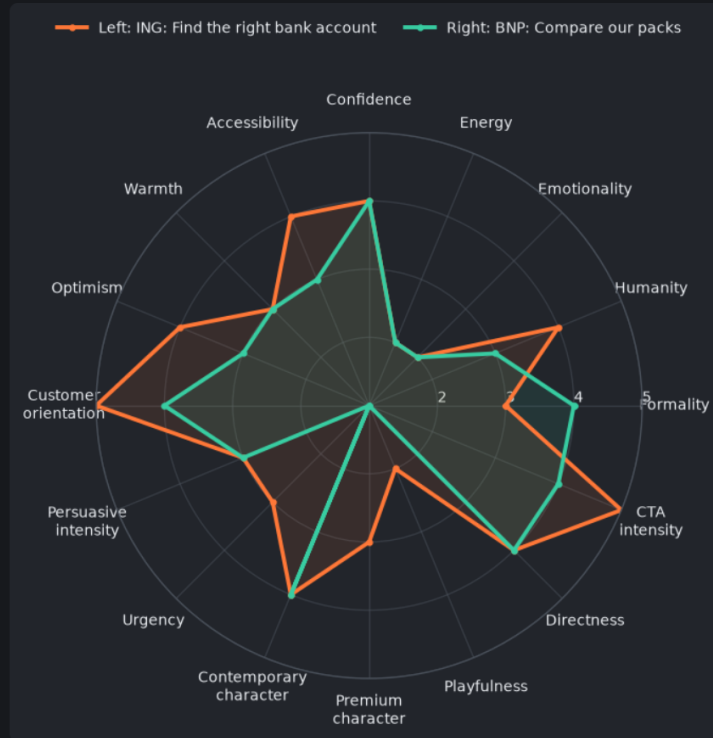

“I have datasets, what now ?”

Comparison level
☒ Individual campaigns ☐ Whole banks

Left campaign
ING_current-accounts-packs - Find the right bank account

Right campaign
BNP_current-account-compare - Compare our packs

Orange = Left: ING_current-accounts-packs - Find the right bank account | Green = Right: BNP_current-account-compare - Compare our packs

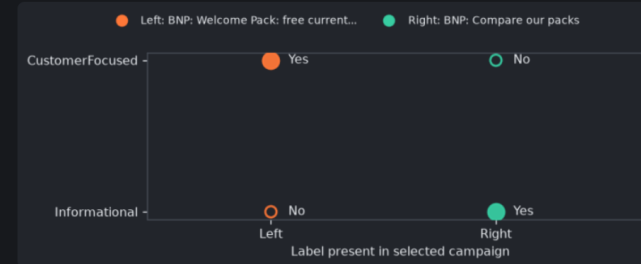

All radar dimensions use the same 1-5 communication scale. A larger polygon does not mean a better campaign.

Categorical comparisons

Classification to compare

Overall communication profile

Yes/No indicates label presence; these are not 1-5 scores. 2 selected campaign(s) have graphable categories. Up to 10 most frequent labels shown; 1

> All category counts

Numerical page, screenshot, and team HTML metrics

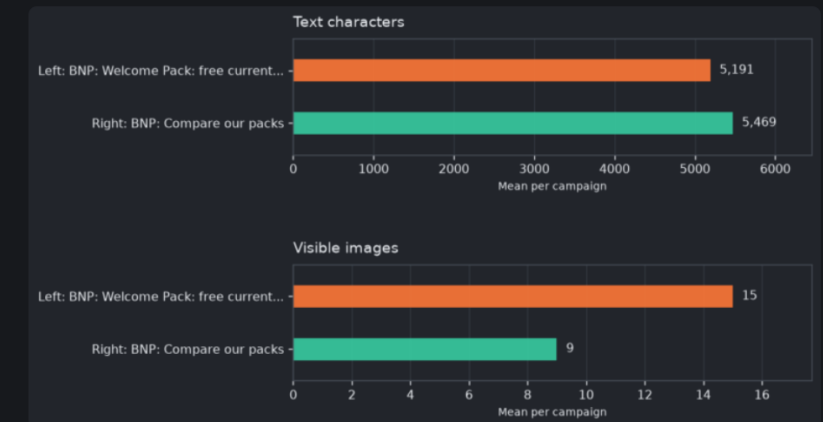

Metrics to chart (up to 3)

Text characters X Visible images X

Metric chart type

☒ Bar ☐ Box

Each metric uses its own axis. Bar = value/mean per selection; Box = distributions for multi-campaign selections or coloured diamonds for single campaigns

- Display and create graph based on data and code
- Compare campaign and feature or banks in multiple way even based on yes or no signal
- Multi layer filtering, nesting,

“So much data, I need help!”

Can you compare communication between ING and paribas is there singificiative difference ?

Scope: 39 selected demo records — **21 BNP Paribas Fortis** and **18 ING**. Scores are 1–5 positions on a standardized communication scale. A higher score only means the page sits further toward that dimension; it is **not** a judgment that the campaign is better.

Headline answer: Across these records, the overall average communication score is almost identical: **BNP Paribas Fortis 3.13** vs **ING 3.10** across 16 dimensions. So there is **no strong overall difference in level**. There is, however, a **moderate difference in profile**.

Largest average differences, using supplied scores

Dimension	BNP mean	ING mean	Observable gap
Formality	3.52	2.89	BNP more formal
Urgency	1.86	1.28	BNP slightly more urgent; both low
Persuasive intensity	3.19	2.67	BNP more persuasive
Customer orientation	4.05	4.50	ING more customer-oriented
Accessibility	3.67	4.11	ING more accessible
Contemporary character	3.48	3.89	ING more contemporary
Humanity	3.33	3.72	ING more human
CTA intensity	3.86	3.89	Nearly identical
Directness	4.00	4.22	Similar
Playfulness	1.52	1.50	Nearly identical; both low

Examples from the records

BNP skews more formal / persuasive / urgent in several campaign pages

- [Arval entrepreneurs page](#): Formality 4, Persuasive intensity 4, Urgency 4.
- [Financial year-end page](#): Persuasive intensity 4, Urgency 3, CTA intensity 4.
- [PSD2 statistics page](#): Formality 5, Humanity 1, Customer orientation 1, Persuasive intensity 1

- *LLM powered chatbot with rags and filtered information*
- *Only know what you currently select to it to know, be specific or general or only want one campaign*
- *Can make graph & table and help you figure out how to spend your precious time better rather than reading the redundant data or place where there is nothing worth nothing.*

**THANK YOU FOR YOUR
ATTENTION**
